

**A First  
Nation  
Venture  
Partnership**

**M**etal Ahnokeewin LP Introduces a Fuel Oil Storage Tank Design to meet the demanding needs of Remote Communities throughout the north.

The storage tanks are rated at 50,000 liters, skid mounted and designed to meet ULC S601-07 requirements.

This is an end supported tank design with heavy rated longitudinal skids. The tank connections and manway are located along the top centerline of the tank. The coating system includes an exterior SSPC-SP6 (brush blast), epoxy primer and enamel topcoat.

The storage tank may be configured with a number of added features to suit the individual client needs. Different sized tanks (both vacuum/non-vacuum) for water, fuel, gasoline, etc. can be manufactured to user specifications if required.

Tanks can be manufactured for Nursing Stations and Retail Gas Bars.

Metal Ahnokeewin 50,000 Liter Fuel Storage Tank (Artist's Concept)

In addition to Fuel Storage Tanks, Metal Ahnokeewin is able to fabricate and also repair many different types and sizes of containers and industrial components. These photographs below illustrate some recent work completed at our Thunder Bay facility. Steel Bridge components and large mining equipment projects/repairs are also possible utilizing our joint venture partnership with Lakehead Marine & Industrial whose capacity includes large Shipping vessel overhauls.
